PROFILE

Information Technology undergraduate seeking a Software Engineering Internship. Interested in full-stack web development, network security, and analytical problem-solving. Looking forward to applying academic knowledge in a professional environment, enhancing technical expertise, and contributing effectively to collaborative projects.

EDUCATION

SLIIT CITY UNI

2023 - Present

Undergraduate in
BSc(hons)Computer Science

Private Candidate

2024

Completed A/Is in Engineering
Technology

Sanghabodhi National College – Nittambuwa

2021

Completed O/Is in 2021

SKILLS

Soft Skills

- Public Relations
- Teamwork
- Time Management

Technical Skills

- Java, Java Spring Boot, JWT Authentication
- SQL, MariaDB
- React, JavaScript, HTML5, CSS3
- NetBean, GitHub

PROJECTS

Inventory and Asset Management System – Group Project Full-Stack Web Development

- Developed a secure Inventory and Asset Management module as part of a larger enterprise system architecture.
- Built a responsive frontend user interface using the React framework and engineered robust backend services using Java Spring Boot.
- Implemented secure user authentication and authorization utilizing JWT (JSON Web Tokens).
- Designed and structured backend data perseverance connected to a MariaDB database.

Mobile Portfolio Administration App – Individual Project Mobile Application Development & Web Integration

- Developed a native Android application that functions as a remote Content Management System (CMS) to dynamically update a personal portfolio website.
- Implemented secure RESTful API integrations (or Firebase real-time synchronization) to seamlessly push content updates—such as new projects, skills, and text modifications—directly from a mobile device to the live web database.
- Designed a clean, intuitive mobile UI to perform full CRUD (Create, Read, Update, Delete) operations on the move.
- Integrated user authentication to ensure secure remote communication and prevent unauthorized data tampering on the web platform.

2D Endless Dodger Game – Individual Project Game Development – Unity

- Designed and engineered an engaging 2D endless dodging game inside the Unity engine.
- Programmed responsive gameplay physics, dynamic asset behavior, and game-loop logic utilizing C# scripting.
- Optimized performance build environments in preparation for seamless cross-platform deployment to WebGL.
